Marking Scheme — Mathematics (Foreign) 30/2/1, 30/2/2, 30/2/3

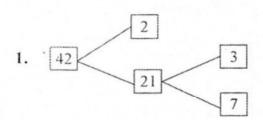

General Instructions

- The Marking Scheme provides general guidelines to reduce subjectivity and maintain uniformity among large number of examiners involved in the marking. The answers given in the marking scheme are the best suggested answers.
- Marking is to be done as per instructions provided in the marking scheme. (It should not be done according to one's own interpretation or any other consideration.) Marking Scheme should be strictly adhered to and religiously followed.
- 3. Alternative methods are accepted. Proportional marks are to be awarded.
- 4. Some of the questions may relate to higher order thinking ability. These questions will be indicated to you separately by a star mark. These questions are to be evaluated carefully and the students' understanding / analytical ability may be judged.
- 5. The Head-Examiners have to go through the first five answer-scripts evaluated by each evaluator to ensure that the evaluation has been carried out as per the instruction given in the marking scheme. The remaining answer scripts meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
- If a question is attempted twice and the candidate has not crossed any answer, only first attempt is to be evaluated. Write EXTRA with second attempt.
- A full scale of marks 0 to 80 has to be used. Please do not hesitate to award full marks if the answer deserves it.
